

INTRODUCING THE

TRUXOR

Multi-Functional Amphibian Machine

New Machine - New Possibilities

First of its kind in the State of Michigan. The newest technology that's strong, unique, and flexible. The Truxor gives new possibilities. Built to provide superb management to any waterway or wetland habitat.

Water, Land or In-Between

Capabilities

DREDGE PUMP with a rotating wheel, horizontal cutters and vertical teeth for removing sediment, roots and other soft objects.

DORO CUTTER for cutting normal aquatic vegetation in water or along river banks and plants found in the margins. The cutter can be used up to 4'6" of water. Can cut in shallow areas where traditional harvesters cannot go.

REED RAKE used for gathering and transporting plants after cutting. This rake can be complemented with strainer plates for gathering of refuse, algae, sticks/brush, floating weeds and absorbers for oil decontamination. **HIGH TIPPING RAKE** for facilitating the loading process onto trailers or barges. Made with perforated plating which can gather small particles such as litter, algae and other floating weeds. **LIFTING RAKE** for lifting heavier objects such as tree branches, rocks and debris.

EXCAVATOR ATTACHMENTS such as **GRIP BUCKET AND LOG GRAB** offering unique possibilities in areas inaccessible to conventional equipment. Ideal for clearing inlets, digging channels, small stump removal, and cable laying.

DORO MILLER CULTIVATOR used as a restoration miller for wetlands, beaches and lake bottom.

DORO SKIMMER used for decontamination of oil spills. **SALA ROLL PUMP** used for vacuuming oil residue where skimmer cannot. **FOILEX** a high capacity pump for use on large oil spills.

The Flexible Multi-functional Amphibian

This new state-of-the-art amphibious machine offers a variety of solutions for lake management. The Truxor is extremely versatile and can be readily converted to offer aquatic weed harvesting, emergent cutting, rake and gathering, trash collector, excavator, dredger, and oil spill clean-up services.

It goes any where and does what other machines can't. Whether it's in the marshlands, bogs, swamps, everglades, bayous, shallows, nature preserves, rivers, ditches, golf courses, canals, marinas, lakes or ponds, near the water, out of water, the Truxor can get work done even without a direct access point to the water.

Ideal for operating in confined spaces and equipped with environment friendly bio-degradable oil. The Truxor provides fast exchange of equipment attachments using a quick connection system.

The Truxor's lightweight construction and great mobility allows for easy transportation. Its amphibious capabilities allow it to travel effortlessly between land and water. The paddle tracks give excellent maneuverability in any environment with minimal ground pressure and little to no damage.
