

**New for
2010!!!**

LakePro Beach Spray

LakePro Beach Spray is safe for use around lakes or ponds. This product is easy to use and is an effective way to keep beach areas free of unwanted vegetation. Beach Spray controls everything from small grasses to cattails and invasive *Phragmites*.

The product moves from the leaves, through the stem, and into the roots, effectively killing the entire weed. However, the Spray does not prevent new weed growth, so most beaches need two treatments per season (early-June, late-July). Effects can be seen within 2-7 days depending on the plant and environmental

Beach Spray is available for individual homeowners to purchase. We sell the product in two amounts:

- **1 Pint – will treat up to 100' two times a year**
- **1 Quart – will treat to 200' two times a year.**

Please call our office to order LakePro Beach Spray and schedule a delivery time.
